Subject: Tenon Jig

Hello Jim,
My name is Mark Davis (Sydney Australia) I recently purchased your Mortise and Tenon jig plans.
Well I'm happy to report that I completed the Tenon jig over the weekend and it works **perfectly**.

At the moment I only have a 20 piece Router set of bits, which means I only have a fixed bearing to the router bit giving me one fixed depth.

I think the hardest part of the Tenon jig will be getting the bearing set!

I must say when I completed a perfect tenon in less than 10-15 seconds, I just stood there amazed and a smile from ear to ear. I had been playing around with the table saw and router table to make tenons but the Tenon jig leaves those for dead.

Jim, the only other problem that I did have was that in Australia everything is metric. The last time I saw a tape measure with inches and centimetres was a long time ago... all our wood, screws, nuts, bolts, drills etc are in millimetres.

So when I'm working of the plans I have a calculator and multiply everything by 2.54 to get to centimetres or millimetres.

If you had a centimetre tenon jig plan life would be complete!

Thanks Jim
Well done

Cheers, Mark Davis
